

WAMA ELECTRONICS TECH CO.,LTD

1. This specification applies to the following 3.0v lithium button cell CR927 made by WAMA ELECTRONICS TECH CO.,LTD.

2. Battery Type and Performance

3.1 Type (IEC Designation): CR927

3.2 Nominal voltage : 3.0 volts

3.3 Nominal discharge capacity : 35mAh (Load: 30kΩ, End voltage:2.0V)

3.4 Outside dimensions : As per drawing attached

3.5 Standard weight : 0.8g

3.6 Guarantee : 3 year

3.7 Characteristics

3.7.1 Open circuit voltage : Will satisfy the figure in Table 1.

3.7.2 Service life : Ditto

3.7.3 Electrolyte leakage resistance: Ditto

3.7 Appearance :

Will be free from flaw, stain, deformation, uneven tone, electrolyte leakage and other defects which impair the value of the commodity.

1. Open circuit voltage

Initial 3.3 to 3.4 v

After 12 months storage 3.0 to 3.2 v

2. Service life

Load resistance 30000 ohms

Discharge method 24 hours/day

End voltage 2.0 v

Minimum duration (Initial) 280 hours

Minimum duration (After 12 months storage) 250hours

3. Electrolyte leakage resistance

No electrolyte leakage will take place during a term of the test of Item 1 to Item 2 in Table 1.

Initial test: A test commencing with one month after delivery.

Stored test: A test conducted after 12 months storage under the specified conditions after delivery.

4. Test

4.1 Temperature and Humidity.

4.1.1 Measurement conditions

Unless otherwise specified, the measurement will be executed at temperature of $20\pm 2^{\circ}\text{C}$ and at relative humidity of $65\pm 20\%$.

4.1.2 Storage conditions

Unless otherwise specified, the storage conditions for sample batteries will be at the temperature of less than 25°C and at relative humidity of less than 75%

The test after storage will be commenced within 1 month after storage.

4.2. Measuring instruments and devices

4.2.1 Voltage measurement will be carried out using the DC voltmeter, which can measure from 0V to 4V. The precision of the voltmeter will be $\pm 1\text{mV}$ or more precise and the input impedance will be more than $10\text{M}\Omega$.

4.2.2 Load resistance will include all the resistance of the external circuit and its tolerance will be within 0.5%.

4.2.3 Dimension measurement will be carried out using the caliper whose measuring range is from 0mm to 150mm and precision is $5/100\text{mm}$ or more precise.

4.3. Test method (Testing procedure)

4.3.1 Dimensions

Use the measuring instrument as specified in the Item 4.2.3.

4.3.2 Appearance

Examination will be carried out by visual inspection.

4.3.3 Open circuit voltage

Measure the voltage between both terminals using the voltmeter specified in the Item 4.2.1.

4.3.4 Service life

Leave the battery samples at the temperature of $20\pm 5^\circ\text{C}$ for above 12 hours, and discharge them continuously through the discharge load specified in Table 1. Carry out the discharge test until the discharge voltage falls down to not less than the final voltage specified in Table 1, and the service life will be discharge time while the discharge voltage keeps above the specified final voltage.

4.3.5 Electrolyte leakage resistance

Check the state of the leakage by the naked eye 30 cm away from them under the light of the 40-watt fluorescent lamp one meter above.
